(54) Title: A CONTAINER

(57) Abstract: A container (3) has a first part (11), a sec-
ond part (9) and a hinge (13) through which the first and
second parts are hingeably connected so that the parts are
hingeable relative to one another between a first position
which places the container in a closed state and a second
position which places the container in an open state. The
first and second parts are also pivotally connected (A-A)
so that the parts are able to be pivoted relative to one an-
other to different angular positions.
